```

- `git remote -v`
```

In [ ]:

```
git status
git branch
git checkout -b feature1

# make code changes
git add --all

git commit -m "update
git push origin feature1
```

```
```
github-rohit   github-prashant

laptop-rohit.   laptop-prashant

````
```

#### Option 1

```
git clone <https-url-from-rohits-repo>
git remote add <new_label> <github-repo-url>
git push <new_label> <branch>
```

```
#### option 2

    git fork
```

## git fork

### git pull

- `git checkout <file-name>`

```
To discard changes in a given file

- `git restore <file-name>`

```

```
- `git reset`

git reset can be used for going back to previous commit in the commit history

--soft
--hard
--mixed
```
