git bash

`git init` - initialises any code repository (directory) for git to track

`.git` - stores all history related to git

how to destroy git repository?

- simply delete `.git` directory from the git repository

cd

How to see hidden files in linux?

- In linux, hidden files/directories are represented by DOT as prefix.
  - Example - .git, .bashrc, .bashprofile

1. git config
2. git init
3. git add (adding files to `staging area`)
4. git commit -m "first commit"

```
git status     # always do `git status` whenever in doubt

git add <untracked files>  # we add files into staging area

git commit -m "commit message"  # files in staging area are commited

git log   # this command shows commit history

git add --all   # moves all the untracked files into `staging area`
```

git vs github

- git
- github -> platform for hosting code repositories

how to ignore files in git?

- you will have to create a file called `.gitignore`

git remote add origin https://github.com/prashant5nov/starwarsAPI.git

git remote add
git branch -M main
git push origin main

client server
local laptop. ----->. github

starwarsAPI

```
- main branch
- feature1
- bug1
```
